Note!
 [1] When internal differential termination resistors are required, V_{ccx} must be greater than or equal to 3V, the IO input-output F_{max} is limited when V_{ccx}=1.8V, and V_{ccx} needs to be greater than or equal to 2.5V for input-output applications with F_{max} greater than 600Mbps.
 [2] When V_{EFUSE} is not required, this power supply can be connected to either GND or floating.
 If multiple power supplies are shorted on some packages or PCBs, it is necessary to take the intersection of the ranges of all shorted power supplies to satisfy the needs of multiple power supplies at the same time.

Notes:
 1.F CLK signal is an external input clock signal.
 It is recommended that F CLK signal be provided through an active oscillator crystal.
 2.External Flash memory is used to store downloaded programs.
 For details about SPI Flash model selection, see "Chapter 4.5 SPI Flash Selection" in UG270,
 Arora 15K FPGA Products Programming and Configuration V Guide .
 3.It is recommended that add an ESD protection chip to the JTAG download circuit.
 4.VCC core voltage requires a large current, so it is recommended to supply power separately.
 5.The MODE pin is the GowinCONFIG configuration mode selection signal.
 For details about how to select the Mode signal, see "Chapter 3.1 Configuration Modes" in UG270,
 Arora V 15K FPGA Products Programming and Configuration Guide.

If multiple power supplies are shunted on same packages or PCBs, it is necessary to take the intersection of the ranges of all shunted power supplies to satisfy the needs of multiple power supplies at the same time.
